CENTRAL FAX CENTER****JUL 25 2007****IN THE CLAIMS**

1 (Previously Presented). A method comprising:
receiving an indicator of the ambient light for a system having a display
by accumulating energy into a plurality of sensors of an imager, deriving an integration
time based upon the accumulated energy and determining the indicator based upon the
integration time; and
automatically adjusting a brightness for the display based upon the
indicator.

2 (Original). The method of claim 1, further comprising:
using the indicator as an index into a look-up table.

3 (Original). The method of claim 1, wherein receiving the indicator of the
ambient light further comprises using a light meter circuit.

Claim 4 (Canceled).

5 (Original). The method of claim 2, further comprising:
receiving a brightness value for the display from the look-up table.

6 (Previously Presented). The method of claim 1, wherein accumulating
energy comprises producing an analog voltage signal.

7 (Original). The method of claim 3, wherein using the light meter circuit
comprises producing a logarithmic representation of the incident light received.

Claims 8-23 (Canceled).
